

Product Name **Poultry feed using natural ingredients**

Area **Poultry farm**

Uses **To feed Chicken**

Poultry Feed

Now-a-days, poultry is playing a significant role in the economy of our country. Egg and chicken meat are main sources of protein which is necessary for increasing physical and mental strengths of human being. Presently poultry farming is the most raising entrepreneurship to our national economy. Irregular supply of nutritional feed, lack of proper vaccinations etc. are obstacles to increase poultry farming in our country. Fish is one of the main items of our regular diet. So, huge amount of fish scales are deposited in our local markets everyday which make the surrounding environment polluted and unhealthy. Considering the present situation relating to unavailability of nutritious poultry feed, an attempt has been made to produce balanced poultry feed from unused fish scales by mixing other natural ingredients enriched with vitamin, mineral and fiber.

Major Raw Material	Fish scale, Wheat bran, Pulse bran, Oil cake and Drumstick dry leaf
Major Plant Equipment/Machinery	Blender, Pellet machine & Dryer
Details of specific application	This product is mainly used to feed chicken in poultry farm
Status of Development	This process is accepted by the BCSIR authority
Ecological/Environmental	This process is environment friendly and cost

Impact (if any, specify briefly)	effective as different kinds of natural ingredients are used in the formulation of this feed
Techno-Economics	Available on demand
Cost of product	45 Tk/Kg
Contact Address	Biological Research Division, BCSIR Dhaka Laboratories
